Envirochemie lays the foundations for its new office and administration buildings

This August saw the laying of the foundation stone for a new office and administration building at the Envirochemie GmbH headquarters in Rossdorf.

The plant engineering and service provider for industrial water technology has enjoyed steady growth in recent years. This is why the company has made the decision to invest in a new building now that its premises have expanded and a new technology centre and chemical production facility have recently been put into operation. Spanning three entire storeys with an overall surface area of around 2100 m², the site will include office spaces for 85 employees.

As mayor of Rossdorf, Christel Sprössler has been delighted with the ongoing growth of Envirochemie and took great pleasure in laying the foundation stone in the presence of the Management Board, staff and guests.

It was decided that the oldest assembly hall at the Envirochemie site would be the one to make way for the new build. In addition to the new, energy-efficient building, a solar-powered charging station for pedelecs and other electric vehicles is also in the pipeline.

The project got underway in July 2017 with an expected completion date set for some time in December 2018.

The mayor of Rossdorf, Christel Sprössler, laid the foundation stone for the new Envirochemie office building in Rossdorf.
