

## Press release

Rossdorf, 29/11/16

### **EnviroChemie introduces integrated management system**

EnviroChemie has had a certified quality management system in place in accordance with DIN EN ISO 9001 for a good 20 years now.

At the end of 2015, EnviroChemie's senior management decided to introduce an integrated management system (IMS) to regulate quality, environment, energy, and health and safety based on current international standards. This IMS was tested during a comprehensive external audit carried out by DMSZ GmbH, an accredited certification company.

All the processes for the development, construction and commissioning of water systems and products, and the services offered, have been clearly documented in a newly compiled IMS manual. After a preparation period of just ten months, the IMS was certified in September. At the same time, EnviroChemie changed its quality management system over to the latest version.

With EnviroChemie, customers can be sure that both the systems and the water treatment media are prepared sustainably, safely and to high quality standards. The services offered are also subject to the rules of the management system. In the annual external audits, the systems' effectiveness is regularly checked.

An overview of the certified management systems in use at EnviroChemie:

- Quality management according to DIN EN ISO 9001:2015
- Environmental management according to DIN EN ISO 14001:2015
- Energy management according to DIN EN ISO 50001:2011
- Health and safety management according to BS OHSAS 18001:2007
